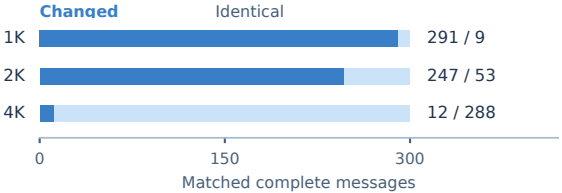
a Realized input change

Main QASPER: density versus closure, n = 300

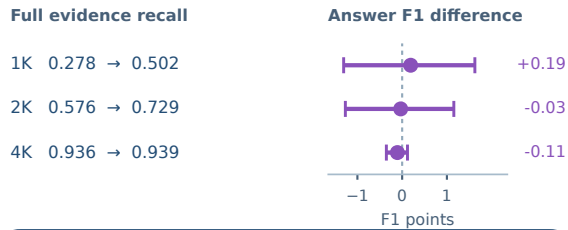


Planner-flat = query-closure
50/50 identical pairs at both 1K and 2K

27 valid plans; 7 with edges; 528 tokens max

b Preservation versus answer gain

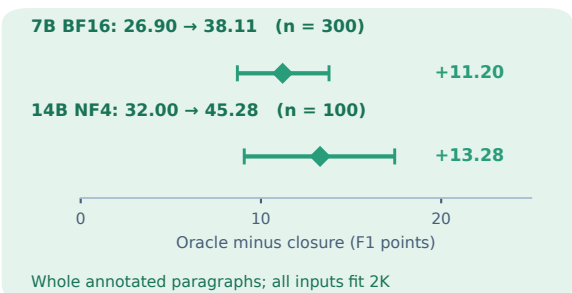
Main QASPER: closure minus density, 7B BF16



Human joint success: 37/60 versus 34/60
Difference +5.00 pp [-3.39, 13.56]; n = 60

c Human-evidence selection headroom

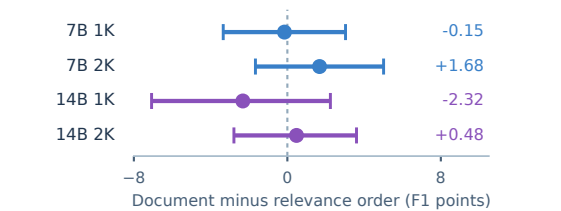
QASPER evidence oracle at 2K; post hoc diagnostic



Whole annotated paragraphs; all inputs fit 2K

d Matched order-only validation

LongBench: identical selected chunks, two orders
7B: n = 150; 14B NF4: n = 50



No consistent order gain
All four paired 95% intervals include zero

Different interventions: preserve structure • replace evidence • reorder an identical set

Points: paired mean differences; whiskers: 95% document-cluster bootstrap intervals (5,000 draws, seed 42).
